Orlando, FL | chrisley.achille@gmail.com | 407-545-9395 | <https://github.com/cachille061>

EDUCATION

University of Central Florida

Orlando, FL

Bachelor of Science in Computer Science

May 2027

- **GPA:** 3.738 | **Honors:** Florida Academic Scholars, Dean's List Honor (4x)
- **Relevant Coursework:** Computer Science II, Computer Logic and Organization, Object Oriented Programming, Processes for Object-Oriented Software Development, Programming Languages, Systems Software, Matrix and Linear Algebra

SKILLS

Languages: C, C++, C#, Python, JavaScript, TypeScript, SQL, HTML, CSS, Java, PHP

Frameworks/Technologies: React, Node.js, ASP.NET Core, Entity Framework Core, SQLite, SDL2, REST APIs, GoogleTest, CMake

Tools: Git, GitHub, Postman, Jira, PowerShell, Excel, Windchill, DOORS

EXPERIENCE

Lockheed Martin – Missiles and Fire Control

Orlando, FL

Systems Engineering Intern

October 2024 – Present

- Verified and drove customer concurrence of **50+** system requirements across a classified system, raising total requirement concurrence to above **80%**.
- Analyzed test data, produced verification reports in **Excel**, and maintained requirement traceability in **DOORS** to support system verification, coordinating development with an agile engineering team via **Jira** sprint planning/story tracking.
- Led the release process of several specification revisions in **Windchill** by integrating approved changes, reviewing engineer feedback, and facilitating change overview meetings with the customer.

PROJECTS

CHIP-8 Virtual Machine

March 2026

- Built a CHIP-8 virtual machine in modern C++ implementing 34 opcodes, fetch/decode/execute logic, timers, input handling, graphics rendering, and audio output.
- Developed an **SDL2** host layer with streaming texture rendering, scancode-based input, and audio callback, separate from the interpreter core.
- Wrote **65 GoogleTest** unit tests covering all opcodes and edge cases and configured the **CMake/CTest** build with RAII resource management and automatic dependency fetching.

Smart Expense Tracker

May 2025

- Developed a **C#** web app with an **ASP.NET MVC** framework, a **SQLite** backend mapped with **Entity Framework**, and a **React** frontend supporting expense tracking, category-based budgeting, and persistent user data management.
- Designed backend CRUD flows and database models for transactions and budget categories, exposing application data to the frontend through structured endpoints.
- Built interactive React UI components for transaction entry, budget visualization, and summary views.

Relay

February 2023

- Built a **Python** Discord bot using asynchronous programming for automated responses, command handling, API data retrieval, and user input logging.
